Los Angeles, CA 90012

Supervisor Antonovich:

I am very concerned by the negative effects of industrial scale renewable energy projects in the Western Antelope Valley.

Green energy is all our government talks about. There is no doubt we need more energy, but it has to be done right. We are ruining our beautiful valley with industrial scale renewable energy projects, which have killed and are still killing hundreds of protected species including raptors. Miles of precious desert land, foliage and more wildlife are now under attack. The Western Antelope Valley will look like the moon, desolate, no growth, nothing but glass panels, where wildflowers, Joshua trees and yucca once thrived. Sounds like "in the name of Green", we will now finish off what's left. This desert will never be the same.

Why not put energy where it belongs; on the roofs of every existing building that is already covering up land, instead of ruining our Open Spaces. Is that too simple? Too much common sense? Too practical? This solution would create plenty of energy with no land wasted.

Thank you,
